

Case study:

Langleys Solicitors

As a well-established and forward-thinking firm, Langleys Solicitors' approach to business places a clear emphasis on innovation, efficiencies and technology as key drivers to success.

Firm Profile

Langleys Solicitors is a full service law firm with both regional and national clients serviced from offices in Yorkshire and Lincolnshire. They have three divisions; Insurance Law, Commercial and Private Law, together with a wholly owned subsidiary, Home Property Lawyers Limited, undertaking residential conveyancing.

The firm is long established and has built up a good reputation for quality and client relationships. This has shaped Langleys Solicitors into what it is today – an innovative and forward thinking business providing clients with a first class service to meet their most exacting requirements.

Size

350 employees

Location

York & Lincoln

Key Applications

LexisNexis Visualfiles, LexisNexis Artiion, LexisNexis InterAction CRM, Rekoop, Access Select, BigHand, Citrix and VMware

Services Provided

24/7 Support, Disaster Recovery as a Service (DRaaS), Email Security & Archiving, AV and Web Filtering

The Requirement

The firm was introduced to CTS when sourcing an IT partner to support their transition to the LexisNexis Visualfiles Case Management System. Langleys Solicitors had taken the strategic decision to move to a more powerful and customisable enterprise workflow solution to make working practices more efficient and improve the user experience.

The firm recognised a need to design a new and improved IT architecture to ensure optimum performance of the new software, providing significant efficiencies to the firm. Business continuity and overall security of the firm's estate were also key drivers for reviewing the current set up.

The Solution

Following a full review of the infrastructure, CTS recommended a complete network upgrade, hardware refresh and the introduction of VMware. A three-year roadmap was created that leveraged the firm's existing investment in IT whilst planning for new technologies required in the future.

Andrew Taylor, Technical Director for CTS explains "The solution provided utilises VMware and a Progress OpenEdge database to ensure the end user experience is enhanced.

As a specialist provider for law firms, we've built up a strong relationship with LexisNexis and developed significant knowledge around best practices for deploying Visualfiles.

A deep understanding of the application is vital to ensure that decisions surrounding technology selection and configuration of the infrastructure deliver maximum performance."

"A deep understanding of the application is vital to ensure that decisions surrounding technology selection and configuration of the infrastructure deliver maximum performance."

Andrew Taylor,
Technical Director for CTS

CTS also proposed enhanced 24/7 Support and a Managed Disaster Recovery service to ensure the firm is prepared to deal with issues and disruptions that occur both during business hours and at evenings and weekends. This new Disaster Recovery solution uses Veeam technology to provide one click testing and failover. Proactive monitoring, improved security and a solid business continuity plan ensure Langleys Solicitors is better protected against cyber threats such as malware, phishing and spamming attacks.

Langleys Solicitors also chose to upgrade to a cloud-based email security and archiving solution. This provides enhanced protection against the threat of cyber attacks and off-site archiving to support data security and governance.

Ian Fowles, IT Director for Langleys Solicitors said "Ensuring optimum performance from our IT infrastructure and business systems is key in supporting our firm's strategic vision for client satisfaction, growth and maximising efficiencies in everything we do. We chose CTS because they were able to demonstrate significant forward-thinking around IT solutions in the legal sector, including the ability to maintain a discipline in their service delivery that we require. This new engagement, and the wider changes we're making to our IT architecture, improve the resiliency of our systems and enable us to make efficiencies that directly impact on our bottom line."

The Results

From the outset CTS understood what we were looking to achieve and their knowledge of LexisNexis Visualfiles gave us confidence that they were the right partner for Langleys Solicitors.

"As with any transformation of this magnitude, it is vital our IT infrastructure is optimised to support and enhance how our business operates. CTS have done a fantastic job of ensuring we're ready for the transition and their experience with this type of transformational change is crucial in ensuring it goes smoothly.

"Since implementation, not only has performance significantly improved, but the level of service to the firm and our clients has been second to none in the legal market, which we are extremely proud of. Furthermore, this has reinforced our certification around Information Security with ISO 27001 and the demands that GDPR will bring" Ian concluded.

About CTS

Founded in 2006, CTS is partnered with the major legal software vendors and is the country's only dedicated cloud computing and managed IT provider for law firms. We're industry specialists, so we understand the regulatory environment, challenges and opportunities faced by firms today.

We work with our clients to align their technology use with their business strategy, delivering robust and compliant cloud solutions that enable firms to improve productivity & profitability, facilitate flexible working and mitigate risk.
